...ABSTRACT A2

A one-way sprag clutch assembly for use in an **automatic transmission**  
or similar application including an inner race (42), an outer race (44)  
having a pair...

...race (44) to provide for inertia resistance for the clutch assembly (41)  
relative to the **races** (42,44). (see **image** in original document)

**Double-crossing the color line: Japanese Americans in Black and White  
Chicago, 1945--1996 (Illinois)**

Author: Harden, Jacalyn Denise

Degree: Ph.D.

Year: 1999

Corporate Source/Institution: Northwestern University (0163)

Advisers: Timothy Earle; Helen Schwartzman

Descriptor Codes: 0326; 0631; 0337; 0323

In this dissertation, I use the tools of ethnography and cultural history in order to rethink the problem of race and the "color line" in twentieth-century America. Specifically, I examine the lives and histories of Japanese Americans in Chicago from 1945 to the **present**. I **show** how the complex relations between Japanese Americans and other ethnic groups lead to a multifaceted **picture** of the construction of **race** in urban America, and make it impossible for us to think of race in America merely in terms of black and white. My primary ethnographic research is with a group of now elderly Japanese American men and women, who relocated to Chicago in the 1940s, and were active over the years in the Human Rights Committee of the Japanese American Citizens' League. My informants recount their experiences dealing with race and racism in Chicago; they also speak of their activism, which attempted to "double cross the color line" by building coalitions for change and justice across the traditional dividing lines of race, age, and class. Over the course of fifty years, my informants were discriminated against as Asian Americans and clearly were not regarded as white; but they also found themselves played off against blacks. Alongside these first-person accounts, I look at the work of three neglected Nisei sociologists of the Chicago School, who trace the shifting positions of Japanese Americans within Chicago's racial hierarchies. I examine the ways that relations between Japanese Americans and blacks were reflected in media images during the post-War period. All this is placed against the backdrop of the ongoing gentrification of Chicago's Far North Side, and Chicago's image as a rigidly segregated city. Overall, my dissertation breaks through the misleading rhetoric that has all too often defined the issue of race in terms exclusively of black and white, and sheds new light on the politics of multiple identities, conflicting interests, and external forces that have defined race relations in America over the past century.

Software firm nets big race

NEW ZEALAND: VIRTUAL WON TV ANIMATION DEAL

New Zealand Herald (XAV) 20 Jul 2001 Online

Language: ENGLISH

Volvo Event Management (Volvo) has awarded a television animation deal to Virtual Spectator (Virtual) of New Zealand. Under the deal, the New Zealand firm will broadcast the nine-leg Volvo Ocean Race (yachting tournament) on the **Internet** using its proprietary animation software. In order to watch the yachting race on the **Internet**, users must first download Virtual's 3D software on the **Internet**. The software allows users to play around with **images** and footage of the **race**, such as fast **forward**, reverse, and replay. The deal is believed to be worth millions of dollars.

Treatment: Applications (A); Practical (P)

Abstract: Skiing ground information broadcast, ski school instruction system, **racing** measurement system, **picture transmission** system and ski patrol contact system were experimented in 1989-1990. At **present**, ski school instruction system is in practice, and skiing ground information broadcast provides a prototype of sightseeing guide broadcast and local area community information broadcast. In consideration of these experiments and practice, several problems are mentioned as follows. (1) Skiing ground information broadcast: Among similar systems, the one permitted legally at **present** is 1620 kHz road traffic information service dealing with transportation and road conditions. Skiers in the skiing resort make great request for guide information service, and early systematization of this system is expected. The authorities of the telecommunication bureau are considering that the system must be practiced as a VHF-FM broadcast. (2) Ski school instruction system: as two to twenty ski classes are held on the same slope at the same time, when all of them use radio, it is necessary for each class to maintain its own channel. Besides, there are problems to be examined about that assignment of frequency for sports instruction. The Ministry of Post and Telecommunications of Japan assigned 8 channels in the UHF wave band. Another problem is how to use two kinds of communication types such as one-way broadcasting and two-way transmission for students' skill in skiing. (3) Racing measurement system: In order to be permitted in international sporting events on equal terms with a wired network, it should be considered to reinforce the foundation for high reliability and high function. However, at informal race and usual training, this system is very useful because the system fully reliable and the equipments set up and withdrawal are both very easy. (4) Picture transmission system: Concerning a simple station, there are two problems as to reliability during the severe cold and countermeasure of power supplies for outdoor moving. (5) Ski patrol contact system: Some skiing grounds have used this system. It is expected to become more popular by making good use of previous experiences and improving both sides of hardware and software. (0 Refs)

**CONTENT ANALYSIS OF REAL-LIFE APPLICATIONS INCLUDING GENDER, ETHNIC, SOCIOECONOMIC, AND DISABILITY REPRESENTATION IN HIGH SCHOOL SCIENCE TEXTBOOKS**

Author: PHELPS, DEBORAH ADAMS

Degree: PH.D.

Year: 1993

Corporate Source/Institution: GEORGIA STATE UNIVERSITY (0079)

Adviser: EDWARD C. LUCY

Source: VOLUME 54/11-A OF DISSERTATION ABSTRACTS INTERNATIONAL.  
PAGE 4054. 193 PAGES

Descriptors: EDUCATION, SCIENCES; EDUCATION, SECONDARY; EDUCATION, BILINGUAL AND MULTICULTURAL

Descriptor Codes: 0714; 0533; 0282

**Problem.** This study explored the extent to which 1990s high school science textbooks reflect applicability of the science curriculum to the everyday lives of all students. Research indicates that students not seeing others like themselves in their science textbooks are less motivated to study science or choose careers in science and technology, and that students taught without real-life examples and applications are unable to apply what they are taught to pre-existing mental constructs.

**Methods.** Operational definitions for real life and applicable were devised in order to collect data from a sample of 12 biology, chemistry, and physics textbooks. Within the chapters of textbooks, passages and illustrations pertaining to real-life were identified as units of analysis. Units of analysis were independently analyzed for relevancy and direct and indirect representation of gender, race/ethnicity, socioeconomic community, and disability.

**Results.** Of the identified units, 72% were categorized as examples/descriptions, and 28% as practical or preservation applications.

More males than females in real-life situations were depicted in textbooks in each of the three subject areas, although two textbooks depicted more females than males. Indirect references were higher for females in biology and for males in chemistry and physics. **Races /ethnicities shown in photos** were 74% white, 16% African-American, 3% Asian, 1% Hispanic, 2% Native American and 4% unidentifiable. Percentages varied by textbook, ranging from 53% to 92% white among all textbooks. Of all units, 34% were categorized as being especially applicable to urban/suburban advantaged students, 31% to rural students, and 3% to the urban disadvantaged. Only three photographs were found of disabled individuals participating in real life activities.

Trends toward avoidance and ambiguity were identified among some of the textbooks, presumably to avoid **presentation** of bias. Exclusive inclusivity was observed in the study and defined as combining gender-inclusive pronouns with otherwise exclusive photographs.

Conclusions. Results suggest that textbooks perpetuate the message that science is not applicable in students' real lives, and that the science depicted by most textbooks is not shown as being for all Americans. The study offers suggestions for making science textbooks more applicable to all students.

**THE INFLUENCE OF COUNSELOR RACE, ATTIRE, AND SPEECH STYLE ON BLACK JUVENILE DELINQUENTS' PERCEPTION OF COUNSELOR ATTRACTIVENESS AND ABILITY TO BE WARM, EMPATHIC, AND GENUINE**

Author: ADAMS, CRAIG LAMOTT

Degree: PH.D.

Year: 1981

Corporate Source/Institution: UNIVERSITY OF NOTRE DAME (0165)

Source: VOLUME 42/03-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1324. 101 PAGES.

Descriptors: SOCIOLOGY, CRIMINOLOGY AND PENOLOGY

Descriptor Codes: 0627

This study examined possible causes of black male juvenile delinquents' resistance to becoming involved in counseling. Often the counseling process will not have adequately begun before the counselor is rejected. It was hypothesized that the juvenile delinquents would prefer working with and respect most that counselor who reflected through his initial appearance values and attitudes similar to those of the youths. Ninety-six black male juvenile delinquents (13 to 18 years old) being detained at a Midwestern rehabilitation facility were surveyed to determine their perception of counselor attractiveness and counselor potential to be nonpossessively warm, accurately empathic, and genuine when counselor race (black and white), attire (conservative and casual), and speech (black American English and white American English) were varied. The first purpose of this study was to determine by a 2 x 2 x 2 analysis of variance counselor attractiveness as judged by the subjects when counselor race, attire, and speech were varied. The second purpose was to determine by a 3(2 x 2 x 2) multivariate analysis of variance if the counselor's racial characteristics influenced the perception of the counselor's ability to be warm, empathic, and/or genuine. The third purpose was to determine any correlations between counselor attractiveness and the counselor's perceived counseling ability. The youths were **shown** a **photograph** depicting a counselor **race** and counselor attire combination and they heard the taped voice of a white or black male speaker. Each juvenile then completed a form rating the **presented** counselor's attractiveness and perceived ability.

Results indicated that the black counselors were rated as more attractive and more capable of being warm, genuine, and empathic than the white counselors. The counselors with the black style of speech were rated

by the juveniles as being more attractive and more likely capable of being genuine than counselors with the white style of speech. It was also found that the young black delinquents rated the counselor who was most similar to them according to race and attire (black and casually attired) as more attractive than both the white/casually attired and the white/conservatively attired counselors. The black/casually attired counselor was rated more likely to be genuine and empathic than either the white/casually attired or the white/conservatively attired counselors and more capable of being warm than the white/casually attired counselor. The black counselor with a black or white style of speech was seen as more capable of being genuine than either of the white counselors. The three-way interaction of race by attire by speech was not significant for either the attractiveness ratings or the genuine, warmth, and empathy ratings. High correlations were found between counselor attractiveness and counselor's perceived ability to be genuine, nonpossessively warm, and accurately empathic.

Research methodological difficulties and potential areas of future research were discussed.

Abstract: The paper focuses on the work being undertaken with regard to the testing of the suitability and applicability of 64-QAM modulated signals over MMDS. The work is part funded under the accompanying measures of 'Digital Image Transmission' of the EU RACE II programme as the project DIMMP. The paper outlines briefly the market penetration and service characteristics of MMDS as an analogue transmission medium and the related functionality of such a system. Service comparisons with competing delivery media are described. The required equipment functionality at the transmit chain for the introduction of digital services is then analysed. There follows a description of the equipment configuration for undertaking a series of trials involving the transmission of a 64-QAM signal in an 8 MHz channel at 2.5 GHz. The trials assess the threshold C/N for acceptable BER rates, the associated power efficiency, the impact of phase noise, the appropriate channel coding and the permitted rolloff when used in channels adjacent to analogue PAL signals. The related testing methodology together with some results are then outlined. Finally, the demonstration scenario for the broadcasting of a four programme multiplex over a single MMDS channel is developed. (11 Refs)

PAGE 403

Descriptors: GEOGRAPHY, SOCIAL ; SOCIOLOGY, ETHNIC AND RACIAL STUDIES

Descriptor Codes: 0366; 0631

This research project examines racial and anthropometric cartography as a feature of late nineteenth and early twentieth century anthropo-geographical thought—a neglected subject in recent geographical work on the construction of race. I begin from the premise that race is a 'socially constructed' phenomenon, which stemmed in part from the tradition of Victorian anthropometry and its obsession with categorising human beings. Using the conceptual framework developed by J. B. Harley, this thesis focuses on the cartographic products of the Royal Anthropological Institute of Great Britain and Ireland, and on the work of four anthropo-geographers: William Zebina Ripley, Ellsworth Huntington, Griffith Taylor, and Herbert John Fleure.

The primary concern of this thesis is to illustrate how racial categories were manipulated, represented and legitimated through the use of anthropometric cartography. These cartographic constructions were domesticated in a wider suite of biological and sociological discourses revolving around evolutionary theory and preoccupations about the progress and decline of racial character within Europe and the USA. I consider the

development of anthropometric mapping within this framework, and seek to show how the power of these images reinforced prevailing assumptions about race .

**THE EFFECTS OF RACE, INTELLIGENCE AND MATERNAL EMPLOYMENT STATUS ON THE CAREER/OCCUPATIONAL ROLE STEREOTYPES OF FOUR YEAR OLD GIRLS**

Author: BROWN, ALEXANDER LIONEL

Degree: ED.D.

Year: 1980

Corporate Source/Institution: INDIANA UNIVERSITY (0093)

Source: VOLUME 41/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1397. 81 PAGES

Descriptors: EDUCATION, GUIDANCE AND COUNSELING

Descriptor Codes: 0519

**Problem.** The primary purpose of this study is to address the comparison of the level of stereotyping held by Black and White girls, which is intended to give some indication of the Career/Occupational roles young Black and White girls consider appropriate for others of the same sex (scale 1) and the types of career/occupations they consider appropriate for themselves (scale 2) on the basis of their own sex and ethnicity.

**Procedures.** The study was conducted with 64 four year old girls, all enrolled in a public pre-school program in a large mid-western city. The subjects were selected using race, Peabody Picture Vocabulary Test scores and maternal employment as variables.

The study design was implemented using a 2x2x2 factorial analysis. It was hypothesized that regardless of race or I.Q., subjects whose mothers were employed would perceive fewer career/occupational role stereotypes than subjects whose mothers were not employed.

Due to the age of the subjects, the Background Data Sheet was completed by the researcher from the subjects' permanent record folders. The instruments were administered to the subjects in the following order:  
(1) Peabody Picture Vocabulary Test, Administration time: 20-30 minutes;  
(2) Sex Role Stereotyping Questionnaire Administration time: 10-15 minutes.

To minimize possible anxieties for the subjects, the researcher visited each participating classroom at least once, prior to data collection. Each subject was removed one at a time, from their classroom to a quiet place in their building for the purpose of testing.

A three way analysis of variance was used to test for main and interaction effects of the three independent variables, race (two levels), maternal employment (two levels), and Peabody test scores (two levels). The analysis of the data was completed using the subprogram ANOVA from the Statistical Package for the Social Sciences (SPSS), Version 7.0 June, 1977. To isolate the components of the interaction that caused the significance, subprogram, one way of the SPSS was run using each component cell of the interaction, then a Scheffee (1959) test of ranges was performed to ascertain significance.

Analysis was performed using a "classic" model. That is, the main effects of A were assessed while B and C were held constant, when C was assessed while A and B were held constant.

Finally, the interactions were assessed while the main effects were held constant.

**Results.** While the general hypothesis was not supported, a post hoc analysis of the ANOVA for scale 2 indicated a significant interaction between race and I.Q. The significance of these findings support the notion that Black high I.Q. subjects held measureably fewer career/occupational role stereotypes for themselves than did high and low I.Q. White subjects. Closer inspection of the instrument revealed that the male items were the primary indicators of career/occupational role stereotyping.

**THE AMERICAN EVE AND ROMANTIC PRIMITIVISM: IMAGES OF WOMEN AND OF ETHNIC OR EXOTIC CHARACTERS IN MID - NINETEENTH-CENTURY AMERICAN NOVELS**

Author: HERZOG, KRISTIN K. H.  
Degree: PH.D.  
Year: 1980  
Corporate Source/Institution: THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL (0153)  
Source: VOLUME 41/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.  
PAGE 1596. 309 PAGES  
Descriptors: LITERATURE, AMERICAN  
Descriptor Codes: 0591

The image of an "American Adam" in a New World garden has been frequently used in American literary history to define the characteristic traits of American fiction. There has been very little consideration, however, of a distinctive difference between American Adams and Eves. The fictional image of women in nineteenth-century America has been determined by the dominance of isolated, individualistic Adam figures. At the same time, **images** used for members of other **races** and cultures (blacks, Indians, Orientals) **show** great similarity to those used for women. Both groups are seen as more emotional, more religious, and more helpless than the rational, energetic, and efficient Anglo-Saxon male. In European terms, he is a Faust figure or a Byronic hero who keeps civilization pressing forward while regarding women and other races or cultures as above or below him: as divine redeemers and naturally Noble Savages, or as temptresses and fiendish plotters. The popular sentimental novels of the mid-nineteenth century use these traditional stereotypes uncritically, whereas Hawthorne and Melville reinterpret and sometimes totally reverse them. The dissertation closely examines and compares four novels by each of these two authors regarding the images of women and of ethnic or exotic characters. Hawthorne and Melville attempt to recover a primitive strength and imagination in women and in other cultures and races, seeing the demonic as well as the redeeming potential of these forces. Both dramatize the complex interdependence of psychological and social anomalies. Hester Prynne of *The Scarlet Letter* has the primitive vitality of an Indian, and the authorities oppress her like an Indian. Taji in *Mardi* is blind to the primitive forces within him and around him, and he sacrifices to his idealistic notions of saving a woman.

The other three authors emphasize the social forces of women and primitive people more than the psychological ones. Harriet Beecher Stowe seems to idealize the "African race" in feminine terms, but a closer look at the wide range of black and white characters in *Uncle Tom's Cabin* reveals her ability to transcend the "romantic racialism" of her day when she passes from general comments to vivid portraits. Her emphasis on feminine nurture implies a critique of the male-oriented Christianity which justified slavery.

William Wells Brown as the first black American novelist depicts beautiful mulatto women whose gentility reminds the reader of many popular sentimental novels. But Brown portrays them with a difference: some of his heroines show surprising ingenuity and daring in their attempt to overcome the proverbial victimization of mulatto women. The outward symbol of this change is, as in Stowe's character of Eliza, the donning of men's clothes.

Delany's Blake tries to create new images of black men and women by choosing an all-black protagonist of heroic stature and a wide variety of black people from different classes whose primitive vigor lies in their radical dedication to freedom. As in the other authors, primitivity of blacks in general and of women in particular is not seen as submissiveness,

low intelligence, or lack of energetic action; it is instead considered a sign of human nobility even in its most violent expressions.

Thus the five writers discussed here transform the old images of dark and fair lady, noble and ignoble savage, by asking the reader to rediscover the primitive forces relegated to women and savages as vital for all human beings. Thereby a psychological and social balance may be restored for American Adams as well as Eves--whatever their color, class, or culture.

**CAMPAIGN FINANCE: DEMOCRATS TURN TABLES ON GOP, OUTRAISING IT IN RACES FOR THE SENATE**

BERKE, RICHARD L

New York Times, Col. 1, Pg. 6, Sec. 2  
Monday October 24 1988

DOCUMENT TYPE: Newspaper JOURNAL CODE: NYT LANGUAGE: English  
RECORD TYPE: Abstract

**ABSTRACT:**

Many Republican Senate candidates this year are finding themselves in unusual and uncomfortable position of being outspent or matched financially by their Democratic rivals; analysis of this year's financial reports finds that for every dollar raised by Democratic candidates, their Republican

opponents collected 87 cents; in 1986 Senate campaign, for every dollar raised by Democrats, Republicans raised \$1.35; candidates in 33 Senate races have thus far collected \$163 million; table **showing money race ; photo** (M)

Abstract (Basic): US 6354838 B1

NOVELTY - An image generator (14) generates the signals indicative of **selected** images from the processed pre-recorded digital images. An image presentation apparatus (26) presents the **selected** digital images to a user, based on the generated signals. A game controller (12) connected to the generator, controls the image generator, in accordance with the input signals indicating the actions of user.

USE - Interactive vehicle simulator system e.g. for race car, aircraft, boat and space ships.

ADVANTAGE - Presents the images at closer viewing distance from the driver without causing eye strain, and at perceived depth, as the pre-recorded images are **selected** to be displayed based on user's actions.

DESCRIPTION OF DRAWING(S) - The figure **shows** the block diagram of interactive race car simulator system.

Game controller (12)

Image generator (14)

Image presentation apparatus (26)

Abstract (Basic): KR 2001078671 A

NOVELTY - A horse racing broadcasting method is provided to enable a user to enjoy a horse racing over the Internet, betting on a horse while watching a horse racing, by implementing a system environment for broadcasting the horse racing over the Internet.

DETAILED DESCRIPTION - The method comprises steps of receiving image signals via eight digital ENG cameras installed at proper positions in a real race track, computerizing the image signals via a DPS( Digital Protect system), distributing the data via a modular channel, transmitting the distributed data to a server, feeding back the data from the server, broadcasting the fed back data via the modular channel over the Internet for enabling the Internet user to enjoy the horse racing, enabling the user to search basic data, e.g. a horse name, a horse rider name, a winning rate, or an age, from a database, and enabling the user to bet on a searched horse by using an electronic payment system.

KR 2001070815	A	1	G06F-017/60	

Abstract (Basic): KR 2001070815 A

NOVELTY - A portal system for horse-racing is provided to enable a user to see a horse racing in a remote place by converting moving pictures of the racecourse into digital signals in real time on the Internet, by enabling the user to purchase a pari-mutuel ticket, and by automatically transferring a dividend to the user.

DETAILED DESCRIPTION - A camera(10) photographs conditions of a horse racing of a racecourse. A receiving unit(12) receives information transmitted from a transmission unit(11) and transmits the information to a moving picture conversion unit(13). The moving picture conversion unit(13) converts the information into digital signals and transmits the information to a streaming server(14) which provides moving pictures in real time. The streaming server(14) constructs the moving pictures as a database. An Internet server(15) provides the moving pictures to user terminals(17,18,19) and automatically transfers

a dividend through a user account(16). The user terminals(17,18,19) receive the moving pictures provided from the Internet server(15) and execute a payment command. A pari-mutuel ticket sale and payment unit(20) sells a pari-mutuel ticket to a user. A moving picture providing unit(21) provides moving **pictures** of the horse **racing** . A dividend **automated** transfer unit(22) automatically transfers a dividend of the user. A member information database unit stores all sorts of information on members.

#### ABSTRACT

PROBLEM TO BE SOLVED: To display a dynamic image in a match and a  
simulating image of motion of each player interlocking with each other by  
displaying a dynamic image recording a state in the match and simulating  
the state in the match onto a display device.

SOLUTION: A CD-ROM is inserted to a main body of a personal computer and a  
menu is displayed on a display device 5 by starting the CD-ROM. A desired  
race is **selected** from the menu. A **dynamic** image display area 21 is set  
in the middle of the display device 5 and a dynamic **image** generated by  
recording an actual **race** is displayed in the dynamic **image** display area  
21. A copied image 25 is displayed on other areas than the dynamic image  
display area 21. The copied image 25 is an image generated by computer  
graphics or the like by simulating an actual race. Though a bicycle race  
track 27 and a start line 31 are not moved but players 29-1-29-4 are moved  
in interlocking with the dynamic image 24. That is, not only the dynamic  
image obtained by picking up an actual **race** but also a copied **image**  
simulating the motion in 2-dimension is displayed.

Abstract (Basic): KR 2001108921 A

NOVELTY - A race betting system and method using data communication  
network is provided to enable a member to conveniently and interestedly  
participate in a betting of a race by **transmitting** the **present**  
condition of the race in real time through the medium of data  
communication network, and by providing an on-line payment unit to the

user.

DETAILED DESCRIPTION - One or more members(10aapproximately10n) include the first to the Nth member modem(14aapproximately14n) capable of connecting a physical communication with data communication network(20) and the first to the Nth member terminal(12aapproximately12n) capable of receiving or outputting a video and an audio signal, a betting signal and a payment signal. A race execution unit(30) is composed of a ultrasonic wave generation unit(31) which is attached to a racing unit and generates ultrasonic waves, a ultrasonic receiving unit(32) which receives the ultrasonic waves generated from the generation unit(31), a frequency band filter(33) which filters a ultrasonic signal applied from the receiving unit(32), a modulation/demodulation unit(34) which converts the signal and a web camera(35) which **photographs** and transmits conditions of the **race** in real time. A race betting operation unit(40) intermediates the communication network(20). In addition, the race betting operation unit(40) processes signals applied from the members(10aapproximately10n) and stores data. An authentication server(58) respectively receives an authentication password from the members(10aapproximately10n), the race betting operation unit(40) and a financial server(60).

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 8190592	A	6	G06F-019/00	

Abstract (Basic): JP 8190592 A

The method employs a couple of display devices for recording and showing a predetermined race. The race that is **currently shown** in the display device are than received in the receiving equipments (16,18) set in remote places. The **race image** thus received are shown in televisions (14,24). Before displaying the race on the TV, the person having the voting rights via telephone (30) takes risks and predicts the winning order of that race as desired by him in the receptionist part (26) of the telephone.

An account is provided for every person having voting rights corresponding to each telephone along with an ID card. In case the winning order as predicted by the person matches with that of the outcome result, an account processing unit of the sponsoring company of race transfers dividend to the back account of that person having

telephone voting rights. Else, a certain sum of money is deducted from the bank account of the person.

ADVANTAGE - Enables to view and enjoy race even from remote places with free of cost. Does not need to perform gambling thereby not spoiling child is education. Offers exact transfer of dividend into account of winning person.

Abstract (Basic): DE 3622618 C

For simultaneous presentation of at least two events, partic. sports such as ski runs, bobruns, skating or jumping events, the direct presentation is simultaneously accompanied by the live result of a further prestored result of the same kind through electronic switching procedures for timewise synchronisation and/or spatial parallel display.

The arrangement used (10) can comprise a t.v display derived through video-cameras (12) for locations (I,II,III). These can have camera leads (14) associated with a central control (16) as well as a monitor (44).

USE - More thorough study or examination.

Alias Wavefront's Alias Studio computer-aided industrial design (CAID) software has been chosen to help modify the external surfaces of Mild Seven Benetton Renault Formula One race cars. The modifications will improve the vehicles' aerodynamics. In addition, the software will help the team generate photorealistic **images** of the **race** cars for marketing purposes. The software demonstrates a superior ability to handle complex 3-D surfaces, which gives the team a great deal of flexibility in exploring different design alternatives. Studio is an integrated package with 3D modeling, rendering, animation, and engineering animation.

QuickFlash 3.0 is a messaging system for offices. QuickFlash is not just an e-mail system -- it is a new type of groupware. It offers instant messaging, for example, sending a last-minute notice of a meeting. QuickFlash users can send messages over the Internet. They can also capture screen documents, annotate **images**, and **send** them **instantly** to everyone in their workgroup. Other features include: NetWare NDS and Bindery integration; delayed messages (reminders); autodestruct option; sounds; and FlashGrid, which can display messages in a grid for easier handling. Versions of QuickFlash are available for 16-bit Windows systems (Version 2.5), law firms (QuickFlash LegalPak), client/server systems, WANs, and intranets.

RasterMaster 7.0 provides powerful, high-performance, cross-platform raster imaging components and tools that offer format conversion, display, scanning, printing, saving, pan, scroll, rotate, zoom, brightness, contrast and sharpen. It includes more than 50 formats encompassing all the popular raster technologies used today. TIFF, Group 3, Group 4, JPEG, PCS, BMP, GIF

(including transparent and interlaced), PDF, PNG, CALS, MO:DCA IOCA, ABIC, DICOM, Flashpix and many others are included. Additional functions of RasterMaster are: (1) comprehensive raster image compression and decompression support; (2) fast **image** printing with **automatic** or manually- **selectable** dithering; (3) high-end document imaging functions including anti-aliasing, automatic deskewing, despeckling, Cornerstone support and more; (4) high-performance display functions including automatic aspect ratio correction, gamma correction, palette selection, display compensation, dithering, zooming and automatic scroll bars; (5) high-speed image loading and decompression (whole image or line by line); (6) image processing functions including resizing, sharpening, brightness and contrast; (7) integrated Twain scanner support (other scanner support available); and (8) wide selection of color conversion functions. RasterMaster technology was created specifically to save time and costs for application developers who need to provide imaging within their product. It removes the burden of supporting the complex and arcane raster formats commonly used today for document management and color image handling. The burden of coding the reading and writing of over 50 raster formats and their continual update, as industry standards change, is transferred from the developers to Snowbound's experts.

ImagN 3.0 is a family of toolkits that allows easy integration of graphic images into Windows applications. Sample code and documentation for various development environments include methods and properties for image zooming, cropping, dithering, rotating, anti-aliasing and more. Multiple development environments and trial tools supported include: (1) super fast color decoding and display of 2-, 4-, 8- and 24-bit BMP, PCX, \*GIF, JPEG, PIC, G3/G4, TGA, Progressive JPEG and Multipage TIFF file formats; (2) fast

imaging support for black and white DCX and document TIFF images; (3) super fast palette optimization **automatically** lets multiple color **images share** the same screen in 256-color display modes; (4) super fast dithering when needed in 16- and 256-color modes; (5) super fast JPEG/PIC decompression by Pegasus Imaging Corporation; (6) support for background decoding directly from MEMO/BLOB fields; (7) built-in zooming, panning and scrolling; (8) the same DLL runs on Windows 3.1x, Windows NT and Windows 95; (9) image type is detected at decode time; (10) printing support using standard report generators including Print Preview; (11) instantaneous image rotation in 90 degree increments; (12) Intel MMXtm optimized JPEG decompression; (13) image zooming and resizing; (14) memory DIB support for thumbnail support; (15) direct access to DIB; (16) copy to clipboard; and (17) toolkits are available for C/C++, Delphi, Visual Basic, FoxPro, Clarion, PowerBuilder, Access and Magic.

DisplayMate for Windows 1.22 is designed to improve monitor picture quality, making Windows and all the software that runs on the computer system look its best. It is designed to: (1) improve sharpness and contrast; (2) reduce certain forms of geometric distortion; (3) minimize or eliminate annoying Moire patterns; and (4) improve color and gray-scale accuracy. The system works by **presenting** a slide **show** of screen **images**, similar in principle to the test patterns used by television stations. The screen images have been scientifically designed to search for every possible potential weakness of a computer monitor at a very high sensitivity. The software then shows how to improve the image, with the eye as the final judge of the results. The system requires no video knowledge and is appropriate for both computer novices and experts alike. It supports all the color modes from monochrome up through full 24-bit color, including the popular 15, 256, 65K and 16.8M color modes. An extensive set of text patterns is provided for evaluating and exploring color quality, balance, range, accuracy and color matching. DisplayMate supports all resolutions and aspect ratios through 4096 x 4096 including HDTV.

D Joiner 1.0 from D vision Works offers designers a range of panoramic and wide-angle photograph stitching options. The system works with a standard wide-angle lens, automatically estimating focal lengths. Web designers can use the software to create cylindrical, spherical, and cubic format panoramic images, publishing them directly to Web pages. Photographers can use D Joiner 1.0 to produce high- resolution, wide-angle photographs that are not marred by lens distortions. D Joiner's cylindrical and spherical panoramas can be accessed with a variety of third-party viewers. Image stitching is handled manually, with designers setting stitching points

between images. D Joiner **automatically** joins **images** after analyzing **selected** points. Overall, the system is flexible and navigated easily. Documentation is solid. D Joiner 1.0 supports BMP and JPG file formats.

GTX's (R) GTXImage CAD (TM) PLUS 2000 allows engineers to import scanned paper drawings into a digital design environment and edit them. GTXImage CAD PLUS 2000 raster and vector drawing system provides computer-aided design (CAD) drafting and raster-to-vector conversion features. Designers can designers edit and clean scanned **images** and **automatically** convert **selected** text and geometry into intelligent files. GTXImage CAD PLUS includes the AutoCAD 2000 OEM Engine, providing users with familiar AutoCAD tools and a straightforward interface. The system offers engineers a number of 2D CAD drafting features, including multiple raster and vector layer, linestyle, and font options. The system also support direct links to Contex, Imtec, Vidar, Widecom, and other large-format scanners. GTXImage CAD PLUS also provides users with raster management and image cleanup tools, e.g. for correcting distortions, importing color and gray-scale images, and smoothing raster images. GTXImage CAD PLUS also includes the GTX OSR (R) batch conversion and GTX ICR (TM) text recognition modules. System users can work with DWG and DXF drawing files. GTXImage CAD PLUS offers engineers 19 raster selection methods, 15 vector object snap modes, 11 vector object selection modes, and hybrid plotting options.

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Fifty-one travel-related World Wide Web sites are listed in a buyers' guide to Web-accessible companies that book trips online. Of special interest to mobile professionals is flight-tracking ability, which is provided by several sites, including TravelAirLine.com, MyTravelGuide, and Trip.com. Flight-tracking services can be configured to send travelers real-time updates on a notebook or mobile device about the status of any flight, whether in the air or on the ground. Text-format is available for Wireless Application Protocol (WAP)-ready phones and two-way pagers, and the graphics version for laptops and personal digital assistants (PDAs) shows the flight's path en route to the destination. Business representatives traveling to international hot spots will benefit from TravelQuest and Uniglobe.com global travel alerts, warnings, and generic information as to current events of interest to travelers. Both sites use links to government Web sites and information sheets from consuls. Travel Time's Metro Worldwide Service, a guide to the world's subway and underground train systems, is another helpful feature for overseas business travelers. Travelers going to other time zones can look at Cheaptraveling.com's link for jet lag advice, and TravelPage.com posts photos and specifications for commercial airliners currently and previously in service. Among topics covered are travel site consortia and the differences between sites.

DOCUMENT TYPE: Review

PRODUCT NAMES: Satellite Images (842869); National Defense (830418)

TITLE: Multi-spectral satellite imaging markets

AUTHOR: Nelson, Lee J

SOURCE: Advanced Imaging, v15 n4 p36(2) Apr 2000

ISSN: 1042-0711

HOME PAGE: <http://www.advancedimagingmag.com>

RECORD TYPE: Review

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

A discussion of multi-spectral satellite imaging markets emphasizes the increasing importance of space intelligence and multi-spectral imagery (MSI) in defense systems. Topics covered include experience in Bosnia, post-fusion, and image processing changes. BTG, an experienced provider of imaging systems, helped with peacekeeping efforts in Bosnia by delivering important information quickly to field commanders. For navigation, a global positioning satellite system (GPS) assisted in production of maps that displayed precise barricade separation lines. Ground personnel could see their exact positions, which represented a significant advantage since a corridor only about 4km wide defined boundaries among various forces being patrolled by American and other peacekeeping personnel. Advanced imaging systems use optically aligned sensors to allow acquisition of discrete images in a single payload. In an environment with multiple platforms, advanced geographical techniques are used. Therefore, useful **images** can be **distributed instantly** for use by each agency's application, which might include camouflage, concealment, deception, science, technology assessment, indication, warning, bomb damage assessment, or C4I (command, control, computers, and intelligence). Many new opportunities will emerge as contractors must meet stringent, dynamic needs. Private sector investments abound in the market for remotely sensed image acquisition, including investments in Aerial Images, Earth Watch, Orbital Sciences Corporation, and Space Imaging, among others.

00119376 DOCUMENT TYPE: Review

PRODUCT NAMES: Adobe Photoshop 5.5 (213756)

TITLE: A Web-Ready Photoshop  
AUTHOR: Grotta, Sally Wiener  
SOURCE: PC Magazine, v18 n16 p48(1) Sep 21, 1999  
ISSN: 0888-8509  
HOMEPAGE: <http://www.pcmag.com>

RECORD TYPE: Review  
REVIEW TYPE: Review  
GRADE: A

Adobe Systems' Adobe Photoshop 5.5, a version of the popular graphics package that has much more Web support, is a must-have for all graphics professionals. The integrated suite now includes ImageReady 2.0, and new features are useful, evolutionary additions. However, streamlined, easy workflow between ImageReady and Photoshop 5.5 is the standout enhancement. Their interfaces are very similar, and their palettes are close to identical. A Jump To icon in ImageReady and Photoshop **sends a current picture**, making a **current** picture interchangeable, with retention of all layers, layer effects, history, other palettes, and other attributes. Images can be optimized for the Web in either ImageReady or Photoshop, using many user-defined variables. GIF, JPEG, PNG8, and PNG24 file formats all have many parameters, allowing users to view the effect on image quality of such variables as file size, download times, compression, and number of colors. New non-Web-related tools in Photoshop 5.5 are extensions of earlier Adobe functions. For instance, Magic Eraser and Background Eraser easily remove clicked colors and make the selected area transparent. ImageReady, which has always created Web- ready images for export to an

HTML editor, has a new Update HTML command that allows two-click updating. Other improvements include new easy-to-create Java script rollovers and automatic/manual, precise image slicing.

A number of digital photo asset-management applications are discussed here, including Cumulus Media Management System 4 for Mac, NT, and UNIX from Canto, ThumbsPlus from Cerious, ImageAXS from Digital Arts & Sciences (now from Caere), JASC Media Center from JASC, and Media Manager Enterprise Edition from Imation. Desktop 4 is a scriptable tool that offers full network capabilities, royalty-free browser **distribution**, and the ability to catalog **images**, text, audio, and video files **automatically**. ThumbsPlus is a graphic file viewing application that organizes digital assets and offers a comprehensive search tool for finding anything from a photograph to a font, as well as being able to create thumbnail images from files that are not capable of creating thumbnails. ImageAXS uses smart keywords when searching electronic asset databases, and the program's dark gray interface is perfect for viewing thumbnail images quickly. Media Center creates albums of multimedia files that can be easily edited with the drag-and-drop interface and searchable keywords. Media Manager Enterprise Edition is a Web-savvy media management suite that uses the ODBC protocol and comes bundled with a PDF browser plug-in.

PRODUCT NAMES: Corel KnockOut (024384)

TITLE: Ultimatte Knockout: Revolutionary New Masking Software  
AUTHOR: Rodney, Andrew  
SOURCE: Photo>Electronic Imaging, v41 n12 p18(4) Dec 1998  
ISSN: 0146-0153  
HOMEPAGE: <http://www.peimag.com>

RECORD TYPE: Review  
REVIEW TYPE: Product Analysis  
GRADE: Product Analysis, No Rating

Ultimatte's Ultimatte KnockOut software helps artists create precise selections or masks. Some tools, like Photoshop, have utilities that can **automatically select** a portion of an **image**, but these sorts of tools often do not do well in masking or selecting complex areas. KnockOut uses a unique process to create complex masks with good results. There are edges, only transitions. Even the sharpest objects have a transition area where one pixel mixes foreground and background colors. By separating these colors at the pixel level, KnockOut provides a very clean and smooth selection that produces a mask that is impossible to detect in the final composite. Users can create masks of objects that would otherwise be impossible to make, such as masks for smoke, wisps of hair, and translucent objects. The Ultimatte process has long been used in film and television. Ultimatte did create a Photoshop masking filter called Photofusion, but it required a blue background. KnockOut, a standalone program, eliminates this limitation. KnockOut requires a significant amount of RAM and it processes very slowly, although it is possible to create the mask itself in minutes. It also requires a hardware protection device to use.

LivePix Company's LivePix SOHO, JASC's Paint Shop Pro 5, Adobe Systems' Adobe PhotoDeluxe Business Edition, Microsoft's Microsoft Picture It! 99, and Micrografx's Micrografx Webtricity 2 are among reviewed graphics packages. Others reviewed are MasterPhotos Studio, PhotoDraw 2000, PhotoImpact, and Print Office. Paint Shop Pro 5 and PhotoDeluxe Business Edition are the editors' choices. LivePix SOHO provides practically an unlimited quantity of information available before the user starts using

the software, and also offers dozens of templates and 20 template collections that include such business documents as brochures, postcards, business cards, and mailing labels. Paint Shop Pro 5, a best buy, is a low-cost, strong competitor to Photoshop. It is easier to use than many professional packages and provides several straightforward but very useful features. For instance, when a **selection** tool chooses an **image** element, **selection** lines **automatically** snap to its outline. PhotoDeluxe, another best buy, is for the somewhat less experienced image editor. The most easy-to-use program reviewed, it also automates many activities. Advanced tools include the Clone tool, which allows duplication of a portion of an image to cover up a problem in another. Picture It!, rated good overall, is easy-to-use and has many features for beginners; automatic fixes are provided by the Quick Touchup feature. Webtricity, rated very good overall, is a full-functioned, advanced product that includes a media manager and six CD-ROMs chock-full of clip art (over 80,000 elements).

An overview to choosing an image makeover/processing system is **presented**, with an emphasis on **image** -integration toolkits. **Selection** criteria include a discussion of formats, file conversion, performance/speed, and functionality. A variety of toolkits are previewed, including TMSSequoia's ScanFix, Lead Technologies' Document Express/Suite, VisionShape's VisionTools, Snowbound Software's RasterMaster, AccuSoft's ImageGear'98, Pegasus Software's ImagXpress, Inlite Research's Clearimage/Correct, Image Access' Bscan, and Visionary Solutions' VisImage Pro. Component system vendors are also presented, such as Kofax, PowerScan, Input Software, Pixel Translations, J&K Imaging, and Dunord Technologies. Before committing to one of the above products or vendors, do the following: try to get downloadable software to test the system, check that the company is financially stable and has a customer base that can be contacted for reference. An Image Processing Checklist is provided.

GRADE: Product Analysis, No Rating

One of the most important cultural projects in Puerto Rico, The Museo de Arte de Puerto Rico, is slated to open in the year 2000, presenting a chronological view of Puerto Rican art. The museum's board of directors teamed up with Mediawire Communications, a new media developer specializing in digital **post** production, 3D animation, and **image** compositing, to produce the best **presentation** for communicating the importance of this museum. They decided to create a virtual walk-through of the museum, using Autodesk's Autodesk 3D Studio MAX to design it. The spaces were built digitally from AutoCAD models and then revised and optimized using 3D Studio MAX running on a dual 300MHz Pentium Intergraph TDZ-2000 with 512MB RAM. Furniture, frames, and artwork from the collection had to be incorporated. Small storyboards were created to begin the animation phase. Images created in 3D Studio MAX had to be transported to a PowerPC 7600. Convincing animations of organic models like trees and plants was time-consuming. Tree Factory, a 3D Studio MAX plug-in, was used to create the trees in replicating the exterior of the building. The project was a challenging success.

GRADE: A

MetaCreations' Kai's Power Show, a multimedia home **photo** and business **presentation** player application, creates astoundingly good, professional-quality presentations, irrespective of the level of expertise

of the user. 65 special effect transitions and dozens of TV-type text animations are included, such as ripple, water, liquid, and light burst. Sound bites and video clips can be easily included. Testers were searching for an application that could easily create updatable image portfolios, attention-getting graphics, and an easy-to-use electronic distribution format. Kai's Power Show meets all these needs. A single CD-ROM includes both Macintosh and Windows versions, and the software includes many sound effect clips, slide backgrounds, and text templates. Large pop-up buttons fade in and out. Round colorful buttons, or Memory Dots, can be customized by the user. KPS has a 'house' metaphor, and users work in four rooms: In, Sort, Edit, and Out. The rooms each have specific tools, and the room-based design streamlines work in a logical way. Users can import media and images to create new projects, with images obtained by choosing from multiple input option buttons what offer direct access to a scanner, digital camera, or other digital input device. PowerPoint presentation slides can also be imported. The QuickShow! option allows users to expeditiously create a new presentation by choosing from a collection of 'statement presets' that established image sequence, transitions, audio choices, and other items.

PRODUCT NAMES: Netscape Application Server 2.1 Windows NT (678716)

TITLE: A Web application engine for the enterprise world  
AUTHOR: Machado, Mike  
SOURCE: Network World, v15 n15 p47(2) Apr 13, 1998  
ISSN: 0887-7661  
HOMEPAGE: <http://www.nwfusion.com>

RECORD TYPE: Review  
REVIEW TYPE: Review  
GRADE: A

Netscape Communications' Netscape Application Server 2.1 gets very good marks overall for administration/deployment, performance, availability, development tools, installation, and documentation. It provides a robust Web application server and a powerful set of tools for constructing and running mission-critical applications. High performance and availability are also advantages, but drawbacks include a high price and an extremely complex design. Testers found that the product provides many functions for development and operation of e-commerce applications. It also had many fewer response latencies and higher throughput when compared with applications on standard Web servers using Common Gateway Interface. Testers also constructed an application that used two Netscape Application Servers, and experienced higher overall throughputs. When failures were forced by a disconnection of power to one of the two, pending requests on the disconnected server timed out, but new requests continued to be processed by the remaining server. Users must employ a separate World Wide Web server to host static pages and images, send requests for dynamic content, and return results to the browser. Database integration is strong; one interface allows access to many native drivers for Oracle, Sybase, Informix Software's, and Microsoft's databases. Tools for site development are not as automated as those of FrontPage or NetObjects Fusion, but Web application generation tools can create basic data input, querying, and

reporting applications for the Web.

Some of the latest innovations in computer security include products such as Miros' TrueFace CyberWatch, Security Dynamics' SecurID, Digital Persona's U.are.U, and Neurodynamics' Witness Security. CyberWatch is a biometrics technology product that uses face recognition as a means of gaining entry into a computer system. The face recognition software is based on neural network technology and is less intrusive than other biometric devices. SecurID, a hardware token system, offers an alternative to ID/password systems that are widely used in intranets. Digital Persona's U.are.U, the IT industry's first fingerprint recognition system for PCs and the Internet, is highly accurate and has a broad range of applications. It provides foolproof data security and has a great deal of potential in the area of electronic commerce. The advantage of fingerprint-based recognition is that a fingerprint is unique, and unlike a password, cannot be lost or forgotten. Witness Security, a witness surveillance system, is a neural network package that is used to **automatically** scan video camera input; it **sends** messages or **image** frames to the police if a security breach is taking place. The software automatically recognizes suspicious incidents.

Panasonic Communications & Systems' EggCam Color Video Camera, InMedia Presentations' Slides & Sound Plus 2.0, and PictureWorks Technology's Spin Panorama are World Wide Web imaging products reviewed. EggCam is a hardware/software-based videoconferencing and e-mail package that includes an egg-shaped camera with an internal microphone on an adjustable base and a video capture board. Also included are White Pine's Enhanced CU-SeeMe, VideoLink 324, and VideoLink E-mail from SmithMicro, and PCI Video Capture from miro. During testing, users ran into problems that indicate the product is unsuitable for business use. Slides & Sound Plus creates slide **shows** of digital **images** that enhance Web **presentations**. The Java-based product requires uploading and hyperlinking to the Web site. A Hypertext Markup Language (HTML) conversion wizard is in the works. Setup is easy, and new features include image enhancement and support for picture import from three online photo centers. Spin Panorama is recommended for businesses such as real estate development, aircraft manufacturing, or television broadcasting in which a full-circle view is needed to demonstrate scenes. PictureWorks also provides a product called Spin PhotoObject that adds an animated GIF option to the available finished file formats.

Microsoft's Microsoft Office 97 and Lotus Development's SmartSuite for Windows 97, two office productivity suites, are reviewed and compared, and Office emerges the editors' choice with excellent marks overall, except for enterprise computing, which is above average. Both products have virtually identical feature sets, including accessory programs and files such as their respective SmartCenter and Office Bar program launchers. However, utilities provided are not equivalent. Lotus provides ScreenCam, for

capturing and playback of movies of screen activities for creation of computer-based training materials. Microsoft Office does not provide a screen-action capture utility, but does include PhotoEditor, which **shows** and prepares **photos** for reports and **presentations**. Both products install easily and include needed modules for software distribution systems, including Microsoft's Microsoft Systems Management Server. All related suite modules can construct and use intranet/Internet hyperlinks and uniform resource locators (URLs) to allow users to publish on the World Wide Web with frames. SmartSuite supports Hypertext Markup Language (HTML) natively, and Office's drawing tools are more versatile for Web table enhancement. Workgroup collaboration in SmartSuite has excellent integration with Notes, and Office can track version changes, while Team Manager operates as a project manager for task management and scheduling. Both products have excellent support, but Office is more customizable/programmable.

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Active Voice's Repartee and Replay Plus, Bicom's BICOMFAX, Biscom's FAXCOM/WorkGROUP for NT, and Bogen's FaxVault are among fax products highlighted in a discussion of many types of fax products, including fax servers, fax blisters, fax mail, fax on World Wide Web, and fax over Internet. Fax's popularity is due to its ubiquitous availability, transmission that is cheaper and faster than overnight mail, and the ability to defer communications. Fax **transmits** typescripting, print, and **images**, and gets more **immediate** processing than regular mail. Faxed signatures are often legally binding, and standard fax runs over analog telephone lines, which makes it secure from hackers. It is also heavily, reliably standards-based internationally. Fax is very easy-to-use, but it is not well-integrated with voice and corporate data infrastructure. However, this is changing as fax modems, voice/fax modems, network fax servers, voice/fax mail systems, and unified messaging systems become available and are installed. Other products highlighted are fax on demand systems and software, and fax blasters, which are dedicated PCs used for promotion and niche-publishing. They have multiple fax cards that transmit documents created on the dedicated machine. Fax helpers include line-sharing devices, fax adapters, hunt group helpers, and DID directors. Fax is also available over ISDN and virtual private networks (VPNs), and will be available for Internet Protocol in the future.

The Talisman project, an initiative to provide low-cost, professional quality 3D graphics for the PC, is described by Microsoft as an exceptionally powerful 3D graphics architecture that can output workstation class performance on a PC. Talisman promises workstation-quality performance from relatively low memory bandwidth and optimization of a 2D layering method to **show rendered images dynamically**. Therefore, a standard frame buffer is not needed. Microsoft has provided architectural guidelines for the technology, but will not build the supporting chips. Microsoft is working with several integrated circuit vendors who are building components to be used in Talisman designs. A multimedia researcher says Talisman is a new technology that will change game development totally. The Talisman project is supported by Cirrus Logic, Fujitsu Microelectronics, Phillips Electronics North America, Samsung Electronics, and Silicon Engineering.

Electronic publishing differs from desktop publishing in several ways. Desktop publishing electronically assembles text and graphics into printed

documents, while electronic publishing disseminates the documents electronically. NeoSoft's affordable NeoBook Professional is a set of programs that can generate standalone, executable electronic documents. Also available is the NeoBook Multimedia Pack, which adds **image** editing features and a slide **show presentation** package. NeoBook, a DOS program, has its own GUI that is similar to Windows. The document creation is done on a layout screen, and similar to desktop publishing packages, text and graphics are placed on a page. The program can link with several different applications. Graphics can be shown in-place while working on the document, but for better performance, users can replace a graphic with a place-holder.

Favorite 1994 products in the scientific computing and automation community are highlighted. SigmaSuite for Windows is a well integrated scientific application suite that allows each module to work with identical data. Optimas 5 is more productive, with image sequence analysis and other tools; it includes better data reporting and powerful new application modules, with support for Object Linking and Embedding (OLE) data sharing with other applications. LabVIEW 3.1 graphical instrumentation software for several platforms includes the new VISA Transition Library and configuration management tools for larger applications; it calls **Dynamic** Link Libraries (DLLs) and **shared** libraries directly. **Image** -Pro Plus provides image processing and color, black and white, and gray-scale images, along with image management tools. NWA Quality Analyst is a full-functioned Statistical Quality Control (SQC) charting and analysis package supporting the most recent Windows functions.

Intel's Smart Video Recorder Pro digital video capture card offers many improvements in its codec and display software, which double the resolution and increase the frame rate to 30 frames per second video on a quarter-screen display. Also, the package has been bundled with a good collection of software from Asymetrix and Tri-Digital Software. The collection contains everything necessary to capture, compress, import, edit, and play back professional video for multimedia applications. Its real-time compression uses a combination of lossy and lossless techniques, so video can be captured to an ordinary hard disk. Additionally, users can

either capture **images** on the **fly** or use **post** -compression for higher-quality compression. The bundled Asymetrix software includes a capture utility, and a digital video and audio editor. Tri-Digital's DigiClips is also included, which offers a good collection of video, voice, and music clips.

Conferencing products are highlighted, products that sometimes allow users to communicate via gestures and demeanor, even though they are not in the same room with other conference participants. Such products can provide real-time video, document sharing, and a **shared**, virtual whiteboard that enables **image** annotation, **presentations**, and document **sharing**. Communicator III is a networked hardware/software video product, with easy to install software. IBM Person to Person is rated poor, because it is incomplete and too difficult to use. DeskTop Conferencing 1.5 operates like a remote control product, allowing one conferencee to control another's machine; it is ideal for network administrators and help desks. TALKShow 2.1 is a very easy-to-use whiteboard, with no application sharing function. Person to Person 1.03 for Windows has a too-spare interface, and functions are not well integrated. Many other products are described.

Intel's Smart Video Recorder Pro digital video capture card offers several major enhancements in performance and quality of captured video. The codec has been improved, and the display software doubles resolution and increases the frame rate to true 30 frames per second video. Intel bundles the card with more software from Asymetrix and Tri-Digital Software, providing everything necessary to capture, compress, import, and edit digital video for multimedia applications. A central feature is the real-time capture and compression capabilities. A full minute of video can be compressed to 8MB. The real-time compression uses a combination of lossy and lossless techniques, letting video be captured to a standard hard disk. Users can capture **images on the fly**, or use **post**-compression to achieve higher quality compression.

Showing the context switching activity for tasks such as interrupts, semaphores, and signals makes it easier to determine the source of a problem. System visualization tools that **show** a graphical **picture** of a system's **dynamic** behavior are offered by three companies. Wind River Systems' WindView, as well as Integrated Systems' Embedded Systems Profiler (Esp) will indicate the status of each task by color or line type. Microtec's Xpert Profiler can switch between a time-line display and statistical display. The statistical display shows how long the CPU takes to perform a given routine or address range. In all three products, information is gathered from the running target system, buffered in target memory, and then sent to the host system for storage and analysis.

Although all large companies use videoconferencing, three important elements are missing, which, when supported, will make the technology a viable, universal communications tool. They are network connectivity, broadcast television-quality video, and product standardization. Easier major carrier network connectivity is necessary to transparently connect participants, and enhanced graphics and documents must be supported, along with **picture** quality. **Current** system **transmission** speeds and compression methods produce generally unsatisfactory results, especially for applications like training, advertising, and medical conferences. Standardization of far-end camera control, high-resolution graphics, and PC-to-PC functions are not in place, which means that various site systems may or may not work together. Vendors are advised to resolve these problems to make videoconferencing affordable for all businesses.

Eastman Kodak's Arrange-It software brings multimedia to the Photo CD. The Macintosh-based program can make interactive **presentations** on the new **Photo** CD Portfolio disc. Users simply **select** and sequence **images** and other files using Arrange-It, and a finishing lab produces a Portfolio disc which can be played on Photo CD players connected to a television set. Up to 700 images can be stored on the disc. Several slide-show animation techniques are available, although it cannot accommodate full-motion video. Branched, interactive presentations can easily be created, making the software good for educational and training purposes. Arrange-It's excellent dissolves and screen effects can be played by most computers, although many standalone CD players cannot run them.

IBM's Person to Person (P2P) is a cost-effective videoconferencing application for OS/2 and Windows that lets users share not only video images, but also view a clipboard, transfer files, talk in real time, and collaborate on a 'whiteboard,' complete with real-time graphical annotations. The latter feature, called the Chalkboard, is probably the most useful, displaying the contents of a window or clipboard, or text or image files from one of the linked systems. Drawing tools can be used to mark the image, and those changes can be viewed by other participants. A Talk utility permits conversation between one or more users, and the shared clipboard lets users paste information from one machine to another, and supports **Dynamic** Data Exchange (DDE). Although still **images** can be **distributed**, **shared** motion video is severely limited by slow frame rates and small image size.

FullShot 2.0 is for Microsoft Windows slide presentation builders, and it supports the use of color printers. The product grabs screens, windows, and partial screens. The captured screens can be used in applications, printed, or used for **presentation** slides. The user **selects image** direction (file, printer, clipboard, or FullShot image-editor window). A custom hotkey can be configured for each of six screen areas, which obviates defining a capture area for every program launch. Capturing freehand-designated areas is a bit complicated, requiring some tweaking of marking pen motions. Operation is generally quick and little hard drive space is required. FullShot is recommended for casual Microsoft Windows presentation makers.

HSC Software is now providing its high-powered Kai's Power Tools for Windows users. Formerly available only on the Mac, the tool, which is a Photoshop add-in, provides dramatic special effects filters and tools for creating color gradients and textures. Kai's Power Tools can be called up from within Photoshop, Design Painter, Aldus PhotoStyler, and Picture Publisher. The unusual filters are **immediately** applied to the **selected image**, and users can control how strongly the filter is applied with a number key. There are no previews of the one-step filter effects, but Kai's Power Tools will display a sample of each effect. A utility is also included for generating fractal designs.

Aldus's PhotoStyler 2.0 provides full control over images, while offering every image manipulation control imaginable. This new version offers many powerful new features as well as higher performance, and precise control over final output. Aldus's philosophy is to eliminate the trial-and-error work that may go into editing. Users can crop out part of an image for editing. PhotoStyler supports TWAIN, a standard Windows driver for scanner support, and Kodak's Precision Color Management System to match the screen to the output device. A convenient Image Navigator provides a thumbnail view of the entire image, with an indicator showing the current window selection. PhotoStyler 2.0 is a powerful tool, that helps make the right editing changes the first time without time-consuming trial and error.

WordPerfect Presentations provides links to spreadsheets and interactive branching. CorelDraw 4.0 for Windows includes modules for charting, photo edit, illustration, slide shows, and presentations. Harvard Graphics appeals to a wide range of users with various skills. Quick Tips and Design Tips make effective presentations, guiding the user about mouse actions and keyboard strokes needed to edit charts. These products are just a few of the many presentation graphics packages listed in the included buyer's guide. Before purchasing, the user should first and foremost consider ease of use for creating presentations quickly. The quality of integration among applications to be used with the product must also be assessed. In addition, the user should verify compatibility with presentations created in earlier packages.
